

- If a coating is necessary, we recommend attaching it to the side surfaces of the wallbox.
- We recommend not applying foil to the front. If you do apply foil, we recommend applying foil to as small an area as possible in the green marked area with a subtle black and white design.
- The charging station has not been tested with foil/stickers on the front; there may be limitations such as a reduction in charging performance at high ambient temperatures.
- Customer branding is recommended in a subtle design in black and white or contrasting colors with a minimum line width of 2 points.
- According to DIN EN 17186, the eM4 Twin must be marked with a "C" symbol on each socket to provide unmistakable compatibility information. *The "C" must be displayed as a black symbol with a white/silver background and a black border, 30 mm wide and 32 point (Arial, Bold).
- This label must pass the test according to IEC 62196-1:2014 Section 8.8.
- If the wallbox or a foiled component is replaced within the scope of the warranty, ABL will not bear the costs for a new foil.
